

Splitting a Panamera to save lives

This article reflects the status at the time of its publication. The content may since have become outdated.

17/02/2017 Members of the fire service train for emergencies like rescuing people quickly and safely from their vehicle following an accident. The best way is to use a real car – and most recently, they have been using a Panamera from the latest generation.

Fire services regularly work with fire service schools at "observer meetings" to revise and optimise their existing guidelines. The latest meeting in Nuremberg focused on the technical procedure for rescuing people from new vehicles. This involves freeing people from an automobile wreckage using tools like large shears and spreaders. In order to turn theory into practice, Porsche provided the emergency services with a new Panamera from the pre-production stage. This was a vehicle that had already served its purpose in internal diagnostic tests.

“Automobile manufacturers create ‘rescue sheets’ for their vehicles to help the emergency services when they need to rescue people”, explains Alexander Grenz from the department Technical Service. These documents show the specific model and indicate the key components, like the fuel tank, battery

and high-voltage components. They also contain additional technical information. “This makes it easier for the rescue team to help people quickly and safely at the scene”, says Grenz.
