

# Porsche Charging Service with more than 49,000 charging points in Europe

*This article reflects the status at the time of its publication. The content may since have become outdated.*

**05/02/2019** Just a few months after the launch, Porsche is expanding its charging service for plug-in and electric vehicles by five countries and a host of new functions: the platform now has over 49,000 charging points in twelve countries.

Alongside Germany, Austria, Switzerland, Denmark, the Netherlands, Belgium and Finland, the charging service is now also available in Norway, France, Spain, Great Britain and Italy.

A new feature offered by the Porsche Charging Service is a rating function. This indicates when a vehicle was last charged at a charging station, and also lets users know how up-to-date and reliable the

information is for the respective charging point. In order to permit better planning of charging operations, the daily capacity utilisation of the charging station is also shown. In addition, the user interface in the app and the navigation function have been improved: After selecting a charging point, it is now easier to switch to navigation via Google Maps, whether on a smartphone or via Apple CarPlay in the vehicle.

## The service performs invoicing via centrally stored payment details

The Porsche Charging Service, the digital platform for all charging-related services, was launched in May 2018. The service searches for suitable charging stations and performs invoicing via centrally stored payment details. It is therefore not necessary to register with different providers. This takes place across the covered countries at a guaranteed unit price per market and independent of currency. The corresponding free app and the Porsche navigation system guide customers to the selected charging station.

Information on the location and availability of charging stations and on the price for vehicle charging are available in real-time. At the charging station, user identification takes place either by QR code via the app or with the so-called “Porsche ID Card”, which users receive free of charge after registering for the service.
