

White Paper – Intermodal Logistics Chains in Cities

23/02/2021 Commercial transport today accounts for 25 to 30% of urban traffic. An alternative to current urban logistics systems can be a combination of light to medium-duty commercial vehicles, streetcars and electric cargo bikes.

In this white paper, Porsche Consulting analyzes the potential of these three modes of transport together with a standardized container as a transport medium for providing sustainable, cost-saving and comprehensive transport solutions. Porsche Consulting has written this publication as part of a consulting project together with the participating partner companies InnoEnergy, ONOMOTION, EurA, Frankfurt University of Applied Sciences, the Hörmann Group and Hermes.
