

Porsche and Michelin support Indonesian rubber plantation farmers

This article reflects the status at the time of its publication. The content may since have become outdated.

14/10/2021 Porsche and Michelin are championing the sustainable extraction of natural rubber. The commitment of the sports car manufacturer and the tyre producer to transparency and better working conditions in the extraction of raw materials is demonstrated by the CASCADE (Committed Actions for Smallholders Capacity Development) project.

Long-term partners Porsche and Michelin are supporting Sumatran small plantation farmers in the extraction of rubber. Education and training on cultivation practices, biodiversity and work safety all have the aim of achieving long-term improvements in the living conditions and economic situations of the Indonesian smallholders.

"For Porsche, responsibility begins a long way from the factory gates. We take a holistic approach to sustainability. Our supply chain and the extraction of raw materials are important factors here," says Barbara Frenkel, Member of the Executive Board for Procurement at Porsche AG. "We take responsibility for our impact on the rubber extraction regions in Indonesia. We want to improve people's lives through projects conducted in the area. Smallholders form the heart of a sustainable supply chain for natural rubber. That's why we are supporting them to achieve a decent standard of living while adhering to good environmental and social practices."

Indonesia is one of the world's most important rubber production regions and includes the rural Jambi province. Porsche and Michelin identified risks to the sustainability of the supply chain in rubber extraction using an app specially developed for this purpose and by conducting discussions with market participants in the area. Rubber is used in a great many industrial products as a raw material. As an automotive manufacturer, Porsche also contributes to global rubber consumption through its tyres as well as in a wide range of vehicle parts.

"CASCADE is an example of Michelin's commitment to a sustainable natural rubber supply chain that protects the environment and improves livelihoods. We are happy to be working with Porsche on this ambitious project. For almost 20 years, we have enjoyed a close partnership in the tyre business, which we are now also expanding to the area of sustainability," says Hélène Paul, Senior Vice President, Chief Procurement Officer at Michelin.

CASCADE

CASCADE is one of the first support projects in the world to start at the lowest level of the natural rubber supply chain. The scheme will see 1,000 smallholders trained by local partners to make extraction methods more environmentally compatible and efficient. This makes a considerable contribution to the lasting improvement of living conditions of smallholders and their families. Porsche and Michelin are investing around one million euros in the project, which will initially run until 2024.
