Air taxi - these are the advantages

This article reflects the status at the time of its publication. The content may since have become outdated.

13/02/2019 Solutions for big city congestion.

According to a study by Porsche Consulting, the first air taxi services will be available on short routes as early as 2025. As an integral part of future urban mobility electrically powered small aircraft that take off and land vertically offer considerable advantages. They are an innovative and fast means of transport that require little infrastructure investment – and additionally provide time and cost savings over the entire route. A potential solution that flies over known traffic bottlenecks. Porsche Consulting has compiled the clearest advantages in an infographic.
