The Cayenne Turbo S E-Hybrid sets an unusual lap record

The Porsche Cayenne Turbo S E-Hybrid has demonstrated its exceptional range of on-road and off-road performance with a very special "record".

As part of a film shoot, the most powerful Cayenne ever clocked a hand-stopped time of 3:51 minutes around the Swedish Gotland Ring, which is still under construction and partly unasphalted. The hybrid SUV ran on used road tyres and was driven by the German racing driver and TV presenter Tim Schrick. While the 3.2-kilometre northern section of the Gotland Ring is already asphalted and in operation, the 4.2-kilometre southern section is still only gravel.

The Cayenne Turbo S E-Hybrid draws its system output of 500 kW (680 PS; fuel consumption combined 3.9–3.7 l/100 km, electricity consumption 19.6–18.7 kWh/100 km, CO2 emissions combined 90–85 g/km) from the intelligent interaction of a four-litre V8 engine (404 kW/550 PS) and an electric motor integrated into the eight-speed Tiptronic S transmission (100 kW/136 PS). The maximum system torque of 900 Nm is available from just above idle. The model accelerates from a standing start to 100 km/h in 3.8 seconds and reaches a top speed of 295 km/h. This exceptional performance is matched by a high level of efficiency: the Cayenne Turbo S E-Hybrid can drive for up to 40 kilometres with zero local emissions. The average NEDC consumption is 3.9–3.7 l/100 km (fuel) and 19.6–18.7 kWh/100 km (electric).
